

Case Study FLR GROUP

Introduction

Rednal Hill Junior School has been an accessible school for a number of years having had an internal lift installed. However, a disabled student could not gain access through the main entrance as it involved climbing 5 large steps.

Project Description

The Head Teacher had been campaigning for years to have a ramp installed at the main entrance. When the funds were finally granted the school was let down by another contractor. FLR Group was then instructed to completely transform the main entrance and incorporated a

new car park to the front, including a designated disabled parking bay.

The works have also included a new fully automated entrance enabling remote opening of the doors for disabled visitors. This has made a vast improvement to the school and its staff, students and visitors.

CUSTOMER TESTIMONIAL

FLR Group picked this up at very short notice after we were let down badly by another contractor. The work carried out was of a high standard and communication throughout the project was excellent.
