Introduction

Brays School is a special school for pupils with physical, learning and additional difficulties.

Project Description

The client required an updated finish to the existing multi-use hall, which is sometimes used as a sensory room for the children. We therefore specified high performance sports vinyl with high shock and impact absorption qualities.

To add to the complexity, the material was to be installed over an existing

Granwood subfloor. Using a loose-lay system saved on cost and installation time as it dispenses with the need to remove and prepare the subfloor.

Products:

- *Gerflor Taraflex Sport M Evolution with Eco-Fit loose-lay backing.*

Sympathetic to the needs of the children and the various uses the room has, we specified Gerflor Taraflex Multi-Use vinyl sheet with its Eco-Fit backing enabling the floor to be laid directly over the existing. With an added border detail the room rapidly became the centre of attention.
